[forgot password](#)[create account](#)

Return a version of the given string, where for every star (*) in the string the star and the chars immediately to its left and right are gone. So "ab*cd" yields "ad" and "ab**cd" also yields "ad".

starOut("ab*cd") → "ad"

starOut("ab**cd") → "ad"

starOut("sm*eilly") → "silly"

...Save, Compile, Run

```
public String starOut(String str) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-2](#)
