[forgot password](#)[create account](#)

Given a string, return the sum of the digits 0-9 that appear in the string, ignoring all other characters. Return 0 if there are no digits in the string. (Note: `Character.isDigit(char)` tests if a char is one of the chars '0', '1', .. '9'. `Integer.parseInt(string)` converts a string to an int.)

`sumDigits("aa1bc2d3") → 6``sumDigits("aa11b33") → 8``sumDigits("Chocolate") → 0`

...Save, Compile, Run

```
public int sumDigits(String str) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-3](#)[Forget It!](#) -- delete my code for this problem
