Given two strings, return true if either of the strings appears at the very end of the other string, ignoring upper/lower case differences (in other words, the computation should not be "case sensitive"). Note: `str.toLowerCase()` returns the lowercase version of a string.

`endOther("Hiabc", "abc") → true``endOther("AbC", "HiaBc") → true``endOther("abc", "abXabc") → true`

...Save, Compile, Run

```
public boolean endOther(String a, String b) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-2](#)[Forget It!](#) -- delete my code for this problem
