Given a string and an index, return a string length 2 starting at the given index. If the index is too big or too small to define a string length 2, use the first 2 chars. The string length will be at least 2.

twoChar("java", 0) → "ja"

twoChar("java", 2) → "va"

twoChar("java", 3) → "ja"

...Save, Compile, Run

```
public String twoChar(String str, int index) {  
    }  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-1](#)[Forget It!](#) -- delete my code for this problem
