[forgot password](#)[create account](#)

Given a string, return a version without the first and last char, so "Hello" yields "ell". The string length will be at least 2.

withoutEnd("Hello") → "ell"

withoutEnd("java") → "av"

withoutEnd("coding") → "odin"

...Save, Compile, Run

```
public String withoutEnd(String str) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-1](#)
