Given a string of odd length, return the string length 3 from its middle, so "Candy" yields "and". The string length will be at least 3.

middleThree("Candy") → "and"

middleThree("and") → "and"

middleThree("solving") → "lvi"

...Save, Compile, Run

```
public String middleThree(String str) {  
    }  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-1](#)
