Given a string, if one or both of the first 2 chars is 'x', return the string without those 'x' chars, and otherwise return the string unchanged. This is a little harder than it looks.

withoutX2("xHi") → "Hi"

withoutX2("Hxi") → "Hi"

withoutX2("Hi") → "Hi"

...Save, Compile, Run

```
public String withoutX2(String str) {  
    }  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-1](#)
