We'll say that a "triple" in a string is a char appearing three times in a row. Return the number of triples in the given string. The triples may overlap.

`countTriple("abcXXXabc") → 1``countTriple("xxxabyyyyycd") → 3``countTriple("a") → 0`

...Save, Compile, Run

```
public int countTriple(String str) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-3](#)[Forget It!](#) -- delete my code for this problem
