 code practice

## Java > String-1 > deFront

[prev](#) | [next](#) | [chance](#)

id/email

password

[forgot password](#)[create account](#)

Given a string, return a version without the first 2 chars. Except keep the first char if it is 'a' and keep the second char if it is 'b'. The string may be any length. Harder than it looks.

deFront("Hello") → "llo"

deFront("java") → "va"

deFront("away") → "aay"

...Save, Compile, Run

```
public String deFront(String str) {  
  
}
```

Show output only (no red/green) ☐[prev](#) | [next](#) | [chance](#) | [CodingBat](#) > [String-1](#)
