Return the sum of the numbers in the array, returning 0 for an empty array. Except the number 13 is very unlucky, so it does not count and numbers that come immediately after a 13 also do not count.

 $\begin{array}{l} sum13(\{1,\ 2,\ 2,\ 1\}) \to 6 \\ sum13(\{1,\ 1\}) \to 2 \\ sum13(\{1,\ 2,\ 2,\ 1,\ 13\}) \to 6 \end{array}$ 

Go ...Save, Compile, Run

```
public int sum13(int[] nums) {
}
```

Go

Show output only (no red/green)
