Java > String-2 > xyzThere

prev | next | chance

Return true if the given string contains an appearance of "xyz" where the xyz is not directly preceeded by a period (.). So "xxyz" counts but "x.xyz" does not.

xyzThere("abcxyz") → true
xyzThere("abc.xyz") → false
xyzThere("xyz.abc") → true

Go   ...Save, Compile, Run

```
public boolean xyzThere(String str) {

}
```

Go

Show output only (no red/green) ☐

prev | next | chance | CodingBat > String-2
